Experimental Situation Report

Strong Storm System To Impact the Central U.S. This Holiday Weekend

- Light, non-accumulating snow is possible late Thursday night through early Friday, then will change to all rain by mid-morning Friday
- Active weather is expected this Christmas weekend as a strong storm system passes over the central U.S. The expected storm track will keep precipitation in the form of rain over the lower Missouri Valley
- Isolated storms and moderate rains will be possible Sunday and Sunday night as the system's cold front pushes through the region. Severe weather is not anticipated at this time
